

### Weier - Replacement construction of substation

**LOCATION:** Weier (Offenburg), Germany

**SYSTEM/TECHNOLOGY:** High-voltage transmission grids

**SERVICES:** Production monitoring, Quality assurance, Documentation, Installation supervision

**INDUSTRY BRANCH/TYPE OF PLANT:** Transmission & Distribution

**CLIENT:** TransnetBW GmbH

#### Project description

TransnetBW GmbH operates the electricity transmission grid in Baden-Württemberg, consisting of around 3,400 kilometers (2,113 miles) of extra-high voltage lines and around 50 substations.

As a result of the measures listed in the grid development plan required for the changeover of the Baden Rhine railway from 220 kV to 380 kV, TransnetBW is building the necessary replacement construction of substation Weier while it is in operation.

#### INP Services

INP was commissioned to handle project management to coordinate the administrative and technical interface with the general contractor.

- Document management for overall project
- Document review to check for contract conformity
- Administration of project meetings
- Analysis and monitoring of the overall general contractor schedule
- Coordination of reconnection phase planning
- Systematic approach for the entire substation, minimization of interface problems
- Construction site inspections/photographic progress documentation
- Factory testing/inspections
