

Renewal of Secondary Technology - Substation Daxlanden

LOCATION: Daxlanden, Karlsruhe, Germany

SYSTEM/TECHNOLOGY: 380 kV-AIS system

SERVICES: Project management, Pre-project planning and tendering, Installation supervision

INDUSTRY BRANCH/TYPE OF PLANT: Power Generation

CLIENT: TransnetBW

PROJECT SIZE: approx. EUR 1 million overall project size

Project description

At Daxlanden, TransnetBW GmbH and Netze BW GmbH operate a 380/220/110 kV substation. The TNG 380 kV AIS plant was built in the 1960s.

INP was commissioned as a general contractor to carry out the preliminary planning for the renovation of the secondary equipment of the existing 380kV system.

This rebuilding measure affects the areas of protection, remote and control system.

Scope of Work

Protection:

- Two new line safety cabinets
- A new coupling safety cabinet
- Adaptations of the remote stations (Philippsburg and Eichstetten)
- New loop for replacement switch operation.
- Wide-area cabinet of the 380 kV system will be expanded
- Creation of new fiber optic cable connections

Telecontrol/control systems:

- New conventional telecontrol technology for the existing 380 kV fields.
